Appendix A Notices

Introduction

In This Introduction	3
About This Manual.	3
Syntax Conventions	3

In This Introduction

This introduction provides an overview of the information in this manual and describes the conventions it uses.

About This Manual

The following statements and segments are presented in this guide:

- SQL statements
- SQL segments
- Stored Procedure Language (SPL) statements

Syntax Conventions

Syntax diagrams describe the format of SQL statements or commands, including alternative forms of a statement, required and optional parts of the statement, and so forth. Syntax diagrams have their own conventions, which are defined in detail and illustrated in this section. SQL statements are listed in their entirety in the *IBM Informix Guide to SQL: Reference*, although some statements may appear in other manuals.

Each syntax diagram displays the sequences of required and optional elements that are valid in a statement. Briefly:

- All keywords are shown in uppercase letters for ease of identification, even though you need not enter them that way.
- Words for which you must supply values are in italics.

A diagram begins at the upper left with a keyword. It ends at the upper right with a vertical line. Between these points you can trace any path that does not stop or back up. Each path describes a valid form of the statement.

Along a path, you may encounter the following elements:

KEYWORD You must spell a word in uppercase letters exactly as shown; however, you can use either uppercase or lowercase letters when you enter it.

(,;+*-/) Punctuation and mathematical notations are literal symbols that you must enter exactly as shown.

" "

Double quotes are literal symbols that you must enter as shown. You can replace a pair of double quotes with a pair of single quotes, if you prefer. You cannot mix double and single quotes.

variable

A word in italics represents a value that you must supply. The nature of the value is explained immediately following the diagram unless the variable appears in a box. In that case, the page number of the detailed explanation follows the variable name.

ADD Clause
p. 7-14

A reference in a box represents a subdiagram on the same page or another page. Imagine that the subdiagram is spliced into the main diagram at this point.

**Relational
Operator**
see SQLR

A reference to the SQLR represents an SQL statement or segment described in the *IBM Informix Guide to SQL: Reference*. Imagine that the statement or segment is spliced into the main diagram at this point.

I4GL

A code in an icon is a signal warning you that this path is valid only for some products or under certain conditions. The codes indicate the products or conditions that support the path. The following codes are used:

SE

This path is valid only for IBM Informix SE.

OL

This path is valid only for IBM Informix OnLine.

STAR

This path is valid only for IBM Informix STAR.

INET

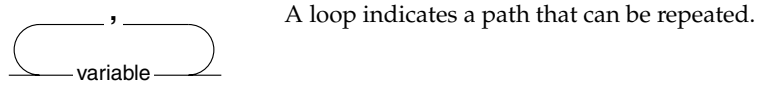

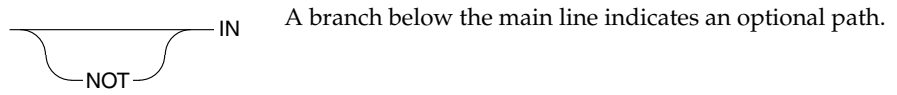

This path is valid only for IBM Informix NET.

I4GL

This path is valid only for IBM Informix 4GL.

- ISQL** This path is valid only for IBM Informix SQL.
- ESQL** This path is valid for SQL statements in all the following embedded language products: IBM Informix ESQL/C and IBM Informix ESQL/COBOL.
- E/C** This path is valid only for IBM Informix ESQL/C.
- E/CO** This path is valid only for IBM Informix ESQL/COBOL.
- E/F** This path is valid only for INFORMIX-ESQL/FORTRAN.
- DB** This path is valid only for DB-Access.
- SPL** This path is valid only if you are using Informix Stored Procedure Language (SPL).
- +** This path is an Informix extension to ANSI standard SQL. If you initiate Informix extension checking and include this syntax branch, you receive a warning. If you have set the DBANSIWARN environment variable, you receive the warnings at run time. To receive the warnings at compile time, compile with the **-ansi** flag.

-  A shaded option is the default. Even if you do not explicitly type the option, it will be in effect unless you choose another option.
-  Syntax enclosed in a pair of arrows indicates that this is a subdiagram.
-  The vertical line is a terminator and indicates that the statement is complete.

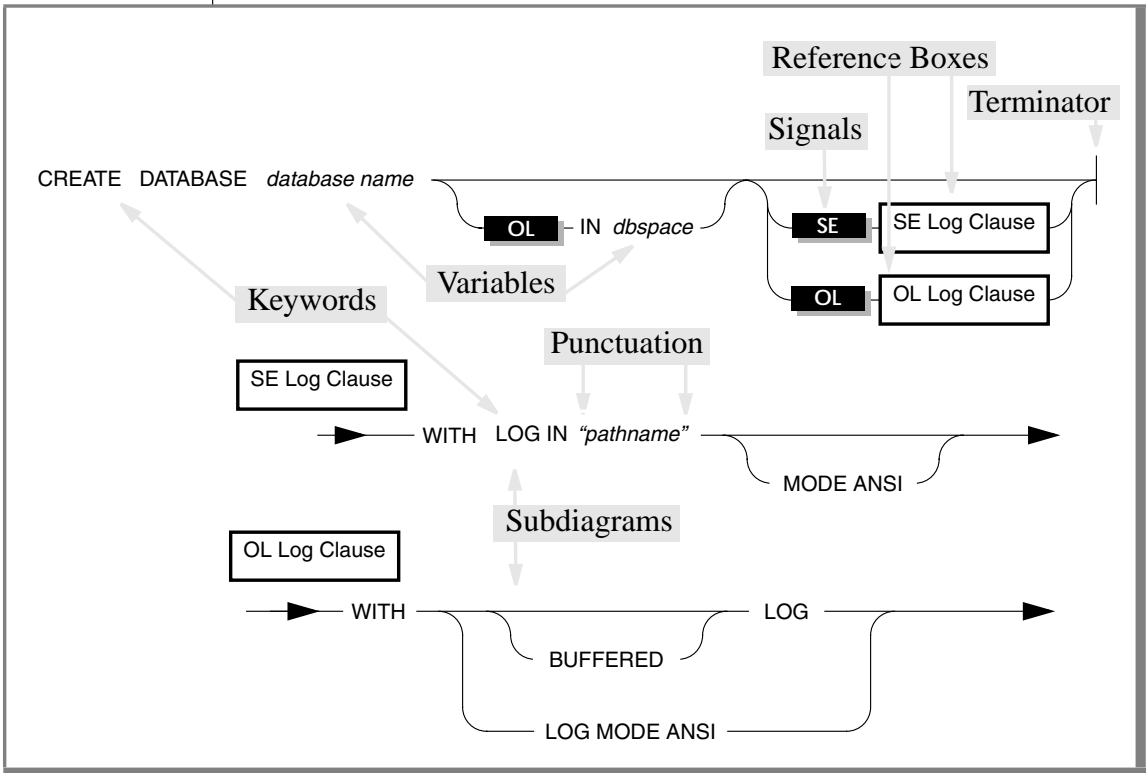

In the *IBM Informix Guide to SQL: Reference*, icons that appear in the left margin indicate that the accompanying shaded text is valid only for some products or under certain conditions. In addition to the icons described in the preceding list, you may encounter the following icons in the left margin:

ANSI This icon indicates that the functionality described in the shaded text is valid only if your database is ANSI-compliant.

X/O This icon indicates that the functionality described in the shaded text conforms to X/Open standards for dynamic SQL. This functionality is available when you compile your embedded-language application with the **-xopen** flag.

Figure 1 shows the elements of a syntax diagram for the CREATE DATABASE statement.

Figure 1
Elements of a syntax diagram

To construct a statement using this diagram, start at the top left with the keywords `CREATE DATABASE`. Then follow the diagram to the right, proceeding through the options that you want. The diagram conveys the following information:

1. You must type the words `CREATE DATABASE`.
2. You must supply a *database name*.
3. You can stop, taking the direct route to the terminator, or you can take one or more of the optional paths.
4. If desired, you can designate a *dbspace* by typing the word `IN` and a *dbspace name*.

5. If desired, you can specify logging. Here, you are constrained by the database server with which you are working.
 - If you are using IBM Informix OnLine, go to the subdiagram named *OL Log Clause*. Follow the subdiagram by typing the keyword `WITH`, then choosing and typing either `LOG`, `BUFFERED LOG`, or `LOG MODE ANSI`. Then, follow the arrow back to the main diagram.
 - If you are using IBM Informix SE, go to the subdiagram named *SE Log Clause*. Follow the subdiagram by typing the keywords `WITH LOG IN`, typing a double quote, supplying a pathname, and closing the quotes. You can then choose the `MODE ANSI` option below the line or continue to follow the line across.
6. Once you are back at the main diagram, you come to the terminator. Your `CREATE DATABASE` statement is complete.
