# **1. INTRODUCTION**

# 1.1 Overview

This System Administration manual describes procedures for menu design, menu security, unix security, programming, printer setup, and terminal setup.

To access the System Administration menu, press the F3 function key while on any Accountflex menu. Upon pressing the F3 key you will be prompted for a menu code. Enter the menu code **SA** (or **D** for some versions) and the following Systems Administration menu will appear.

		samenu
ACCOUNTFLEX	Company Name I em Administration Menu (SA)	DATE: 08/07/07
MENU BUILDING 1. Design 2. Print - Detail 3. Print - Documentat MENU SECURITY 5. Define User Types	PROGRAMMING 11. Select Source 12. Edit Source 13. Compile Source 14. Run SQL statement	
6. Define Users 7. Change Password 8. Print Permissions	MISCELLANEOUS 18. Printer Control 19. Printer Configurat 20. Terminal Control 21. Email Users 22. Email Messages 23. Email Attachments	tion
En	ter Selection > 1 _	

The chapters that follow explain each of the above menu choices.

# **1.2 Features**

The System Administration menu provides many features for configuring your system.

Below are some of these features:

- Menu building.
- Password protection by user.
- Menu choice security by user.
- Program modification
- Printer Control (i.e. compressed print, pitch, etc.)

- Printer Configuration (i.e. identification names, lines per page, character width, etc.)
- Terminal Control (i.e. graphics, keyboard, attributes, etc.)
- Unix security.

# **1.3** About the Document

This manual is designed to be a comprehensive Systems Administration guide for the AccountFlex System. This guide is organized into two levels, Chapter and Section. Each chapter describes a major function; each section describes various aspects related to the chapter. Below is a brief summary of each chapter in this manual.

# **Chapter 1 Introduction**

This chapter provides a summary view of the System Administration Manual.

# Chapter 2 Menu Building

This chapter provides general instructions on how to build or change Accountflex menus.

# Chapter 3 Menu Security

This chapter provides instructions for the menu security system. In this chapter you will learn how to assign user passwords and control user access to menu choices.

# **Chapter 4 Printer Setup**

This chapter provides instructions for setting up printers.

# **Chapter 5 Terminal Setup**

This chapter provides instructions for setting up terminals.

# Chapter 6 UNIX Security

This chapter describes how UNIX file permissions may be used for additional security.

# 2. MENU BUILDING

# 2.1 Overview

This chapter explains how to build menus (options 1 - 3 on the System Administration menu). You will want to read this chapter in order to add or change menus.

# 2.2 MENU BUILDING

To add or change menus select option 1 on the Systems Administration Menu. The following entry screen for building menus will appear.

														CW	menu2
INFO	FLEX	CH	IANGE	MODE	]		MENU	BUILI	ER		D.	ATE:			
Me	enuCode Title1	∍ M Mas	ter 1	Ienu	Prev N	ienuCo	ode		_	Templ	ate	actmei	nu	_	
r 1	Title2 Mo.Colu	umns	0	form	nat	top	row	0 cc	1 0	bott	om r	ow 0	col	0	
	Desc	ript	ion										P	asswo	rd
	1 <mark>Acco</mark> M R	ount	Rece	ivable	;										
	2 Acco M P	ount	Payał	ole											
	3 Gene M G	eral	Ledge	er											
	4 Payr M E	roll													
	5 Bank M B	Rec	onci	liatio	on										
	<b>F</b> O <b>F</b>				54						<b>F</b> 40		<b>AF</b> 4	A.R.F.	
r I Save	rz r Help	5	r4 Add	rs	гь Qry	r/ Prev	r8 Next	r9 Frst	r IU Last	FII	rız Del	- F 3	··· F 4	~F5	Move

The menu builder screen behaves and adheres to the same rules as for any other Accountflex entry screen (refer to Chapter 2 of any Accountflex Module manual).

Below is a description of each screen field.

#### Menu Code

This is the code name for a menu. We recommend that it be short, such as M for master menu or P for accounts payable menu, though it can be up to 10 alphabetic characters in length. Do not use numbers in the menu code.

#### **Previous Menu Code**

This is the code name for the menu that calls the menu you are defining. A main menu, of course, would not have a previous menu.

#### Template

You may create custom menu formats called templates. The template name is the first parameter of a **MENU** section in **menu.flx** The template name can be up to 18 characters in length. Where the **template** field is left blank, the menu format will be automatically generated at run-time. For a technical discussion about creating templates, please refer to your Infoflex-4GL manual Chapter 6.5.

# No. of Columns

A menu can list its options in single or multi-column format. By default, the menu choices will be listed in a single column. To organize menu choices into multiple columns you would specify the number of columns here. Note that a 0 or blank for the number of columns is the same as 1. This value is ignored where a template has been specified.

# Title

There can be up to two lines of 76 characters each for the menu title.

# Format

There are three format options for a menu. The default, which is no value for format, will display a frame around a menu. Option N will not display the frame. Option O is for overlayed menus. An overlayed menu will display in a bordered window.

## Top Row, Col, Bottm Row, Col

If you have specified a overlay format (previous field is set to 'O') then you will need to provide the coordinates for the overlay. The coordinates are entered as the row and column of the upper left corner and the row and column of bottom right corner.

The array portion of the menu builder screen allows you to define each menu choices. Below is a description of each array field.

## Description

The option description or text can be up to 60 characters in length. If you define a menu template with shorter fields or use a two column format, your option text will be truncated.

#### Password

The **Password** may be 8 characters in length and is used to restict access to a menu choice. A menu choice having a password will require the user to enter the password in order to access the program specified in the **Execution** Line (see below).

#### **Execution Type**

At run-time a menu option may invoke another menu, a program, or a function. The execution type is specified with an **M**, **P**, or **F**.

#### **Execution Line**

For an execution type of  $\mathbf{M}$  the execution line for the option is a menu code. For an execution type of  $\mathbf{P}$  the execution line is a program command, such as:

#### flex filename

For an execution type of  $\mathbf{F}$  the execution line is a function call. In the third case the **menu.pic** file must be invoked by a custom Infoflex application program, that is, a program in which **INSTRUCTIONS** section C language functions are linked (more on this in the Infoflex-4GL manual Chapter 7, THE INSTRUCTIONS SECTION).

#### **Clear Screen Flag**

Entering  $\mathbf{Y}$  to this field will cause the screen to clear when the menu option is invoked. Entering  $\mathbf{N}$  or leaving it blank will cause the screen not to be cleared. Note that Infoflex or Accountflex screens will automatically clear without having to set the **Clear Screen Flag** equal to  $\mathbf{Y}$ .

#### **Before Option RETURN**

If you enter  $\mathbf{Y}$  to this field, the menu will require the user to enter RETURN before executing the option. Entering  $\mathbf{N}$  to this field or leaving it blank will result in the default behavior of not prompting.

# After Option RETURN

If you enter  $\mathbf{Y}$  to this field, the menu will require the user to enter RETURN upon returning to the menu after executing the option. Entering  $\mathbf{N}$  to this field or leaving it blank will result in the default behavior of not prompting.

# 2.3 MENU PRINTING

To print menus select option 2 or 3 on the Systems Administration Menu. The menu reports operate like any other Accountflex report program (refer to chapter 2 in any Accountflex module manual).

Below is a sample report showing the Accountflex master menu.

INFOFLEX	(	PRINT MENU	DAT	cwmenur E: 06/30/99 ======
Menu Cod Template	le: < M > : actmenu	Prev Menu Code: No. Columns:	0

# **3. MENU SECURITY**

# 3.1 Overview

This chapter describes the AccountFlex menu security system (options 5 - 10 on the Systems Administration menu). This chapter will show you how to (1) assign user passwords and (2) control user access to menu choices. Both of these security options may be user specific.

There are 2 steps in setting up menu security. The first step is to define **User Types** and their respective menu permissions. The second step is to define each **User Account** and assign them their **User Type**.

The following sections will describe each of these steps in greater detail.

# 3.2 Defining User Types

To define User Types, select the menu choice Define User Types. The following screen will appear.

				menutvr
INFOFLEX [	ADD MODE	DEF	INE USE	R TYPES AND PERMISSIONS DATE: 08/07/07
User Type	Menu Name	0 М	H N	D Description
apcleark arclerk superuser sysadmin	P R S SA SA			A/P Clerk A/R Clerk Sales Order Entry Full Access user
r.	Tess FLRM I	unction	key to	assign MENO permissions
Enter User Ty	/ре			
F1 F2 F3 Save Help	F4 F5 Add	F6 Qry	F7 F8 Prev Ne:	F9 F10 F11 F12 ^F3 ^F4 ^F5 ^F6 xt Frst Last Del Perm Clr Copy

Below is a description of each field on the above screen.

# **User Type**

Enter a user type. Define a user type for each group of users that will have like permissions.

# Menu Name

Enter the menu name the user will start with. The menu name is the unique code assigned to each menu (also called menu code). When running the menus, this code is displayed at the top of each menu within parenthesis. You may press the **HELP** key to select or search from a popup list of valid entries.

Menu Security

# 0

Enter 'N' to NOT permit access to the Operating System.

# М

Enter 'N' to NOT permit menu jumping (F3 key from any MENU).

# H

Enter 'N' to NOT permit zoom access from within HELP, or enter 'V" to permit zoom access but in VIEW mode only. Zoom access from HELP allows users to add new entries to the HELP popul list by pressing the **ZOOM** function key.

# Description

This is a freeform description field.

To specify menu permissions for a **User Type**, press the **PERM** Function key. Upon pressing the **PERM** key, the Menu Permission screen will appear as shown below.

		menunerm
I	MENU PERMISSIONS Master Menu (User Type: superuser)	RMISSIONS DATE: 08/07/07
	1 Account Receivable 2 Account Payable 3 General Ledger 4 Payroll	n Entra
	5 Bank Reconciliation 6 Inventory 7 Bill of Material 8 Sales	s user
	9 Furchase Order 10 Job Cost 11 Point-of-Sales 12 System-Wide Control	
	V Press PERM function key to assign MENU	permissions
<mark>Ente</mark> F1 Save	er '-' to deny perm, '=' to not show, and 'V' f F2 F3 F4 F5 F6 F7 F8 F9 F10 Help Qry Prev Next Frst Last	<mark>or View only</mark> F11 F12 ^F3 ^F4 ^F5 ^F6 Zoom

This is a *MULTI-RECORD* screen listing the menu choices found on the **User Type's** starting menu. The column preceeding each menu choice is where you will grant permissions. This column may be one of 4 values.

Value	Description
blank	allow permission to execute the menu choice.
-	deny permision to execute the menu choice.
=	do not show menu choice.
V	permit the menu choice but in view mode only. This option is applicable if the menu choice calls an Infoflex data entry program.

If a menu choice calls another menu, press the **ZOOM** key to bring up its Menu Permission screen. For example, pressing **ZOOM** while cursored on the Accounts Receivable menu choice will bring up the following Menu Permission screen.

I	— MENU	MENU PERMISSIONS Account Receivable (User Type: superuser)	ONS DATE: 08/07/07
	2 3 4 5 6 7 8 9 10 11 11 12	1 Enter Invoice 2 Print Batch 3 Post Batch 4 Print Journal 5 Enter Adjustment 6 Print Batch 7 Post Batch 8 Print Journal 9 Enter Receipt 10 Print Batch 11 Print Checks 12 ACH Withdrawals	y y ssions
Ent F1 Sav	er '-' F2 re Help	to deny perm, '=' to not show, and 'V' for Vie F3 F4 F5 F6 F7 F8 F9 F10 F11 F Qry Prev Next Frst Last	ew only F12 ^F3 ^F4 ^F5 ^F6 Zoom

If the menu choice does not call another menu but instead executes a program, the following Menu Permission screen will appear.

The following is a description of each field on the above screen.

#### **Permission List**

This field is for listing permission keywords that will be passed to the program executed by this menu choice. Permission keywords are used to provide program specific security. For example, if you do not want to show the Social Security Number when accessing the employee entry screen you would specify the permission keyword **NOSSN**.

# **Overide Command**

You may specify a command to be executed when this menu choice is selected. This command will overide the default command which is displayed below.

# **Default Command**

This is the command that will be executed when this menu choice is selected unless the **Overide Command** is specified above. This is a view only field.

Besides the **PERM** function key, there are two other important functions keys available when defining **User Types**: **CLR** and **COPY**. The **CLR** function clears previous menu permission settings. THe **COPY** key copies menu permissions from one **User Type** to another. Each of these functions is shown below.

When you press the **CLR** function key, the following screen will appear.

					menuclr						
INFOFLEX [	CHANGE MODE	DEFINE	USER TY	PES AND PERMISSIONS	DATE: 08/07/07						
User Type	Menu Name	0 М Н	N D	Description							
apcleark arclerk sales superuser sysadmin	P v R v S v SA v			A/P Clerk A/R Clerk Sales Order Entry Full Access user							
	Clear permissions for User Type sysadmin Press SAVE function key to clear Press ESCAPEKEY to abort										
Pr	ress PERM fun	ction key	to ass	ign MENU permissions							
F1 F2 F3 Save Help	F4 F5	F6 F7	F8 F	'9 F10 F11 F12 ^F	73 ^F4 ^F5 ^F6						

To clear a specific User Type, enter the User Type in the prompt provided. To clear ALL User Types leave the prompt empty.

When you press the **COPY** function key, the following screen will appear.

								menucony
INFOFLEX	ADI	) MODE	DEFINE	USER T	YPES AND	PERMISSIONS	DATE:	08/07/07
User Typ	be Menu	ı Name	ОМН	IND	Descrip	tion		
		0 0 0 0 0						
		Сору ре	rmission	is for U to U	lser Type Iser Type			
		F	Press SAV Press	E funct ESCAPER	ion key EY to ab	to copy ort		
	Press I	v PERM fur	action ke	y to as	sign MEN	U permission	15	
F1 F2 Save Help	F3 F4	F5	F6 F7	F8	F9 F10	F11 F12	^F3 ^F4	^F5 ^F6

To copy permissions from one User Type to another, fill in the for and to User Types on the above screen.

# 3.3 Defining Users

			menuuse
INFOFLEX	ADD MODE	DEFINE USERS	DATE: 08/07/07
User Accour	nt User Type 🛛 Passw	ord Description	
DEFAULT janis john mark peggy sharon	sales y sparr arclerk v canar superuser v eagle sysadmin v hawk superuser v condo apcleark v robin v v v v v v v v v v v v v v v v v v v	ow y  r 	
<mark>Enter User D</mark> e F1 F2 F3 Save Help	<mark>escription</mark> F4 F5 F6 F7 Add Qry Pr	F8 F9 F10 F11 F ev Next Frst Last I	512 ^F3 ^F4 ^F5 ^F6 Del

To assign users their User Type permissions, select the menu choice Define Users. The following screen will appear.

Below is a description of each field on the above screen.

#### **User Account**

Enter a valid user account or sometimes called user login. User accounts are created from within UNIX or NT and are prompted for at login (refer to your operating system's System Administration guide for further information).

Note that there is a special user account called **DEFAULT** which may be optional entered. The **DEFAULT** account will be used for any undefined user accounts accessing the system.

# User Type

Enter a valid user type to assign to this user account. You may press the **HELP** key to select or search from a popup list of valid entries.

#### Password

Enter a password for this user account. This is an optional entry and, if entered, will require the user account enter this password prior to bringing up AccountFlex.

# 3.4 Change Password

This choice will also allow you to change user passwords but for the currently logged on user account only. If you would

like users to change their own passwords you can place this choice on the main menu.

The screen for changing passwords is as follows.

_													me	nupass	word
	ACCOUNTFLE	ΕX	1	Syster	( n Adm:	Compa: inist:	ny Nam ration	ne n Ment	u (SA	)	DA	TE: O	8/07/	07

# 4. PROGRAMMING

# 4.1 Overview

This chapter shows how to develop or change Accountflex programs (options 11 - 17 on the System Administration menu). Before tackling this chapter, you should first read the Infoflex-4GL manual.

# 5. PRINTER SETUP

# 5.1 Overview

This chapter shows how to manage your printers using the **Printer Control File** and the **Printer Configuration File** (options 18 and 19 on the System Administration menu). The **Printer Control File** is where you will define your printer's command sequences for compressed print and pitch. The **Printer Configuration File** is where you will specify printer additional parameters such as its identification name, printer control file name, character width, and page length. Both of these printer files are optional and are only necessary if you require the control features they offer.

# 5.2 Printer Control File

This section describes how to install and edit a printer control file. The printer control file contains command sequences that are specific to your printer model. These command sequences control printer characteristics such as compressed print and pitch levels. The following 2 subsections describe how to Install and Edit the **Printer Control File**.

## 5.2.1 Installing the Printer Control File

Install the **Printer Control File** by assigning the control file name to the environment variable **FXPRINT**. Below is the command to set **FXPRINT**.

FXPRINT=hplaser; export FXPRINT

#### 5.2.2 Editing the Printer Control File

If the **Printer Control File** must be modified or does not exist, you will need to edit/create it. To edit/create a printer control file, select **Printer Control** on the the System Administration menu.

The following menu will appear:

```
SELECT PRINTER TYPE
```

```
    tosh351 : Toshiba P351/P321/P341
    hplaser2 : HP Laserjet Series II
    ex800 : Epson EX-800
    pan1091 : Panasonic KX-P1091
    nec2080 : Nec 2080
    Enter printer number (a=add, q=quit):
```

If the printer is not on the menu, add it by entering an 'a' to the above prompt. The system will prompt you for the printer name and then add it to the list of selectable printers.

After selecting a printer the following menu will appear:

PRINTER SUPPORT MENU (/usr2/fx/dev)

Assign settings.
Display settings.
Print settings.
Test settings.
Save settings.
Save & Install settings to /usr2/fx/dev.
Q. Quit.

Select Menu Option #

The following subtopics briefly describe what each above menu option does.

## 1. Assign settings

You will be placed in an editor to assign control sequences. The control sequences are written in **termcap** style (eg., the **ESC** character is E).

# 2. Display settings

Control sequences will be displayed at the terminal.

# 3. Print settings

Control sequences are printed.

# 4. Test settings

This option is not implemented at this time.

# 5. Save settings

This option saves the control sequence settings to the directory .../fx/src/term.

# 6. Save & Install settings to .../fx/dev

This option saves the control sequence settings to the directories .../fx/src/term and .../fx/dev. The version in .../fx/dev will be used by Infoflex at run-time.

# Q. Quit

This option exits the program.

# **5.3 Printer Configuration File**

This section describes how to install and edit a **Printer Configuration File**. The **Printer Configuration File** allows you to specify additional parameters about each printer such as its identification name, printer control file name, character width, and page length. The following 2 subsections describe how to Install and Edit the **Printer Configuration File**.

# 5.3.1 Installing the Printer Configuration File

Installation of the **Printer Configuration File** consists of assigning the environment variable **FXPRT** the fullpath of where the configuration file resides. A sample configuration file resides in the path **.../fx/dev/prconfig**.

To set the **FXPRT** environment variable for the sample configuration file enter the following command.

#### FXPRT=.../fx/dev/prconfig; export FXPRT

Note that you should copy the sample **prconfig** file to a private area so any future updates will not overwrite your changes.

#### 5.3.2 Editing the Printer Configuration File

The next step after installing your printer configuration file is to customize it for your site.

To customize the configuration file select **Printer Configuration** on the the System Administration menu. You will then be placed in an editor in order to modify the configuration file.

The sample configuration will appear as follows.

Infoflex	OS P	Printflex		Bottom End				
Name	Name	Name	Width	Length	Margin	Feed	Options	
0	laserjet	hplaser	80	60	2	Υ		
1	laserjet	hplaser	80	60	10	Y	-olandscape	
2	laserjet2	hplaser	170	60				
3	deskjet	hplaser	170	60				
disk	Serial	hplaser	80	60				

Below is a description of each field or column.

#### Infoflex Name

This is the name Infoflex uses to refer to the printer. To route an Infoflex report to this printer you would enter a **Report Destination** of **P** followed by the Infoflex printer name. For example,

#### **Report Destination: P1**

If you enter a **P** without an Infoflex printer name, it will default to the Infoflex printer name **0**.

Note that users can have different default printers by assigning them different Printer Configuration Files.

# OS Name

This is the operating system's destination name for this printer. For Windows/NT use lpt1, lpt2, etc..

# **Printflex Name**

This is the name of the **Printer Control File** that applies to this printer.

# Width

This is the printer's character width. If the report output exceeds this width it will automatically be compressed (provided the compressed print sequences are defined in the **Printer Control File**).

# Length

This is the printer's lines per page. This is important for correctly aligning pages.

# **Bottom Margin**

Not used at this time.

# **End Formfeed**

Enter "Y" if you would like a formfeed at the end of each report.

# Options

These options are passed *as is* to the printers interface program. One popular option is the landscape option which would be specified here as *-olandscape*. This feature is not available on DOS/WINDOWS.

# 6. TERMINAL SETUP

# 6.1 Overview

This chapter shows how to manage your terminals using the **Terminal Control File** (options 20 on the System Administration menu). The **Terminal Contol File** is required in order to run Infoflex screens under UNIX operating systems only. The **Terminal Control File** is where you will define your terminal's command sequences for such characteristics as video attributes and key recognition.

# 6.2 Terminal Control File

This section describes how to install and edit a terminal control file. The terminal control file contains command sequences that are specific to your terminal model. These command sequences control terminal characteristics such as video attributes and key recognition. The following 2 subsections describe how to Install and Edit the **Terminal Control File**.

# 6.2.1 Installing the Terminal Control File

Install the **Terminal Control File** by assigning the control file name to the environment variable **FXTERM**. Below is the command to set **FXTERM**.

## FXTERM=wyse60; export FXTERM

Normally you will not need to set **FXTERM** because it defaults to the value of **TERM**.

#### 6.2.2 Editing the Terminal Control File

If the **Terminal Control File** must be modified or does not exist you will need to edit/create it. To edit/create a terminal control file select **Terminal Control** on the Systems Administration Menu.

The following menu will appear:

SELECT TERMINAL TYPE

1. 2.	t v i 910 t v i 920	:	TeleVideo 910 TeleVideo 912C/920C				
3.	t v i 925	:	TeleVideo 925				
4.	v t 52	÷	DEC VT52				
5.	adm3a	:	LSI ADM 3A				
6.	viewpt	:	ADDS Viewpoint/3A Plus				
7.	altos3	:	Altos III				
8.	altos4	:	Altos IV				
9.	altos5	:	Altos V				
10.	wyse	:	Wyse WY-100				
11.	wyse50	:	Wyse 50+				
12.	wyse60	:	Wyse 60				
13.	pcunx	:	ISC UNIX 5.3				
14.	pcxnx	:	SCO XENIX				
15.	ansi		: SCO XENIX V/386				
Enter terminal number (a=add, q=quit):							

If the terminal is not on the menu add it by entering an 'a' to the above prompt. The system will prompt you for the terminal name and then add it to the list of selectable terminals.

8

After selecting a terminal the following menu will appear:

TERMINAL SUPPORT MENU (/usr2/fx/dev)
 Assign CRT & ACTION KEY Settings.
 Assign ACTION KEYS Settings via Keyboard.
 Display CRT Settings.
 Display ACTION KEY Settings.
 Print Settings.
 Test Settings.
 Save Settings.
 Save & Install Settings to /usr2/fx/dev.
 Load Settings from TERMCAP file.
 Quit.
 Select Menu Option #

The following subtopics discuss what each above menu option does.

#### 1. Assign CRT & ACTION KEY Settings

You will be placed in an editor to assign control sequences. The control sequences are written in **termcap** style (eg., the **ESC** character is E).

# 2. Assign ACTION KEYS Settings via Keyboard

In this mode, you can define the control sequence for a action key by simply pressing the action key at the keyboard. Action keys are defined as non-data entry keys such as Function keys, Arrow keys, and Control keys.

## 3. Display CRT Settings

Terminal output control sequences will be displayed at the terminal. A \* by the capability description indicates that the capability is required by Infoflex. A \*\* indicates that the capability is desirable.

# 4. Display ACTION KEY Settings

Keyboard input control sequences for action keys will be displayed at the terminal.

## 5. Print Settings

Control sequences are printed.

## 6. Test Settings

This option is not implemented at this time.

# 5. Save settings

This option saves the control sequence settings to the directory .../fx/src/term.

## 6. Save & Install settings to .../fx/dev

This option saves the control sequence settings to the directories .../fx/src/term and .../fx/dev. The version in .../fx/dev will be used by Infoflex at run-time.

# 9. Load Settings from TERMCAP file

This option loads the control sequences definitions from your UNIX /etc/termcap file. Be sure that the terminal name assigned in the termflex.dir file is the same as the one in termcap.

After loading from **termcap**, the **A\_TYPE** capability may need to be updated. **A\_TYPE** tells TERMFLEX how to set a video attribute. This flag is set to **1** if the terminal sets attribute bytes before and after an output string. The flag is **0** if the terminal does not bracket the output string with attribute bytes. This setting corresponds to the **sg#** parameter of **termcap**. TERMFLEX assumes that the terminal will use a consistent method for outputting video attributes. This may not always be the case as **termcap** will allow a mixture of methods (eg.: **sg#0**, **ug#1**). To resolve this you will want to use the specific attribute control sequences in your terminal manual to define attribute settings.

# Q. Quit

This option exits the program.

# 7. UNIX SECURITY

# 7.1 Overview

This chapter describes how to set UNIX file permissions so users can not access the Accountflex programs directly from the UNIX operating system. If your users to not have direct access to the UNIX operating system this may not be a concern.

To protect against direct access from UNIX follow these steps.

- 1) Logon as root.
- 2) Create a user called *infoflex*.
- 3) Position to the directory ...act/bin
- 4) Run the command **actperm**

./actperm

Actperm will modify all Accountflex files to have owner and group set to infoflex.

After **actperm** is run, users (other than *root* or *infoflex*) will NOT be able to access, modify, or delete Accountflex programs directly from the UNIX operating system. All users will however be able to run **actd** to bring up the Accountflex system.
