

# MULTITONE CORDLESS HANDSETS

## CH72 CORDLESS HANDSET

### Compact

The CH72 cordless handset has been designed to be robust and rugged as well as slim and light at just 121 grams. Each unit provides the user with 16 hours continuous talk-time, or 150 hours battery standby allowing you to stay mobile for the whole day.

### Simple to use

The CH72 offers full telephone transparency, and can be used independently, or together with a desktop telephone. Sharing the same telephone number means there are no new extension numbers to remember. The CH72 is also fitted with a large alphanumeric backlit display and features internal and external ring patterns, volume control, LED indication of incoming and unanswered calls and a host of other user friendly features.

### DECT Open Standard

The CH72 utilises Digitally Enhanced Cordless Telephony (DECT) technology, a global open specification offering speech quality similar to that found on a fixed landline. Fully secure with speech channel encryption, the CH72 ensures privacy and security.

### Increased Features and Functionality

Multitone's latest cordless handset offers many new and improved features and functions that have been designed into the phone to make it even more robust. The handset is equipped with an auto login facility that allows it to roam between 10 different systems, ideal for users who have more than one site.

With a built-in telephone book capable of storing 65 numbers, a re-dial facility for the last 10 numbers dialled and a 14 message storage capability the CH72 allows you to be truly mobile without the need to carry other storage medias.

Because users of the CH72 carry their telephones with them at all times (even into meetings and discussions) a built-in silent mode has been included. This feature mutes the ringer so that users can give their full attention to the task at hand while providing a visual or sensory indication of any calls.

A key-lock function prevents inadvertant dialling of numbers while the handset is in a users pocket or on their belt.

The handset also features call transfer capability, automatic off-hook features and call line identity so that the identity of another DECT caller can be established the call is answered.

## CH72 CORDLESS HANDSET

### Specification

Code format: DECT-GAP

Approval: Generic Access Profile (GAP) compliant

RF output: 250mW

Voice quality: Digital

### Operation

Features: Volume control  
Auto login for 10 systems
